

WHAT IS CLAIMED IS

1. A developer supply container detachably mountable to an image forming apparatus, comprising:
a container body for containing a developer;
5 a discharge opening for permitting discharge of the developer from said container body;
shutter means for unsealing and sealing said discharge opening;
wherein said shutter means has a first
10 shutter member and a second shutter member resealably provided at a position facing to said discharge opening.

2. A container according to Claim 1, wherein
15 said first and second shutter members are overlapped with each other when they seal said opening.

3. A container according to Claim 1, wherein
said first and second shutter members are provided
20 with respective sealing members at positions where said first and second shutter members are contacted.

4. A container according to Claim 1, further comprising urging means for urging said first and
25 second shutter members toward each other.

5. A container according to any one of Claim 1 -

s 4, wherein said first and second shutter members has
first and second engaging portions engageable with
said image forming apparatus, and wherein said first
and second engaging portion receives force x for
5 moving said first and second shutter members in
closing directions in interrelation with a mounting
operation of said developer supply container to the
main assembly of said apparatus.

10 6. A container according to Claim 5, further
comprising regulating means for regulating the
movements of said first and second shutter members in
the opening direction, said regulating means being
releasable in interrelation with the mounting
15 operation of said developer supply container.
